BE QA AUTO TEST ASSIGNMENT

Requirements (obligatory):

• Refactor the given project
• Make it run correctly on Gitlab CI
• Use BDD format: Cucumber/Gherkin
• Required framework: Java Serenity + Maven

You need to:

• Automate the endpoints inside a working CI/CD pipeline to test the service
• Cleanup the project and implement it in the proper way
• Cover at least 1 positive and 1 negative scenario
• Write instructions in Readme file on how to install, run and write new tests
• Briefly write in Readme what was refactored and why
• Upload your project to Gitlab and make sure that CI/CD is configured
• Set Html reporting tool with the test results of the pipeline test run
• IMPORTANT!!! Provide us with a Gitlab link to your repository

Good Luck!
